Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to a test device with a protective coating, classified in class 422, subclass 61.
- II. Claims 17-28, drawn to a protective coating composition, classified in class 427.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a different protective coating could be used such as transparent adhesive tape. The subcombination has separate utility such as a coated for a device that requires the solvent layer to evaporate.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
